

ERROR: 3051

ERROR MESSAGE:

Error 3051: The Microsoft Jet database engine cannot open the file C:\E-Exam\CERTEST.MDB. It is already opened exclusively by another user, or you need permissions to view its data.

SOLUTION/FIX:

You need to have full read/write access to the C:\E-Exam folder in order for E-exam to be able to save data to the folder.

Check your permissions to ensure that you have permissions to read/write to this folder. You may have to ask your computer support folks to give you administrative rights on the PCs in your testing area to ensure you have full permissions.

COMMENTS:

This sometimes occurs when you are in a network environment and one of the workstations does not have proper permissions to access the E-exam folder on the server PC.

It can also occur if you do not have administrative rights that allow you to add/delete programs or take similar action on stand-alone PCs.
